

Vermont Apple IPM Alert

Lorraine P. Berkett

June 10, 2004

Quick Update: **Fire blight** blossom blight symptoms should be present now in all sites we are tracking except So. Hero. if infection had indeed taken place during bloom. **Plum Curculio** - we have not yet reached the end of activity. **Codling Moth** - it is estimated that we have reached 3% egg hatch in the Shoreham and southern areas which is a good time to manage this insect if populations are high. ***More details will appear in the June Newsletter issue next week.***

Mark it on your calendar! - There will be a HACCP for the Juice Industry workshop presented by Diane Wright Hirsh (U Conn) on July 6 and 7 in Rutland. The cost is approximately \$200.00. More detailed information will be sent to you in our June Newsletter.
