

Vermont Apple IPM Alert

Lorraine P. Berkett

June 28, 2004

Plum Curculio - if you have not checked the webpage recently or do not have access to the internet, please be aware that 340 DD had been reached at all of our monitored sites by June 19th. If you had put on an insecticide within 10-14 days of June 19, you should have been covered through the period of PC activity.

Oblique-Banded Leafroller - 600 DD (Base 43F) were reached at the HRC on June 20. Now is the optimal time to scout for second generation OBLR in your orchard.

Apple Maggot Flies - We started catching flies last week in baited red spheres -- be aware that these insects are active now
